

Meeting Report

Transcript:

[18:54:30] Hi, everyone. I hope our transcription is being shown on our app. The first and foremost thing that we are going to introduce our product as this is mostly dependent upon computer science domain.

[18:54:40] Why do we want to do it only this way? It is called artificial intelligence. Is very much.

[18:54:43] A new thing.

[18:54:55] There is still a chance for it to match, but right now, I think AI agents are being very much.

[18:55:06] Think for NV company. And same exact thing we want to do with our company as well. What we want to do is bring efficiently into our company and make.

[18:55:14] A more computer admin rather than human dominant. What we want to do is.

[18:55:16] Create.

[18:55:18] More.

[18:55:29] Different understanding.

Summary / Insight

1. List unique computer science terms with one-sentence explanations:

- Artificial intelligence: A field of computer science focused on creating systems that perform tasks requiring human-like intelligence.
- AI agents: Autonomous programs designed to perform specific tasks using artificial intelligence.

2. Provide a concise overall takeaway:

The speaker emphasizes leveraging artificial intelligence and AI agents to make their company more efficient and computer-driven rather than human-dependent.

3. Add a 1-2 sentence summary:

The meeting discusses the company's focus on integrating artificial intelligence and AI agents to improve efficiency and shift toward a computer-dominated workflow. The goal is to reduce human dependency and enhance operational effectiveness.
